PROFESSIONAL SUMMARY

Data Specialist who catches **data defects** before they compound. At **Provox Global**, I owned end-to-end data migrations for a **legacy system to a modern ERP**: extracting source data with **SQL queries**, validating completeness, and verifying post-load figures matched pre-migration totals.

At **Cowlar Design Studio**, I designed **data models** and **RBAC permissions** for a Hotel ERP's staff & full guest revenue cycle, where misconfigured status or access logic could cause unauthorized charges, billing errors, or conflicting guest state across departments. I also worked on **pricing/discount rule logic** for a retail ERP handling **1,000+ SKUs**, where misconfigured promotional logic could cause **under or over-charging**.

CORE COMPETENCIES

Data Analysis & Validation: Data quality assessment, completeness and consistency checks, data validation

SQL & Data Transformation: SQL querying, data extraction, transformation, data mapping, source-to-target validation, relational data analysis

Data Modeling & Architecture: Data modeling, entity relationships, business-rule mapping, data structures, access-control data design

Anomaly Detection & Root Cause Analysis: Data discrepancy investigation, anomaly identification, exception analysis, error tracing, root-cause analysis

Reporting & Automation: Power BI, Looker Studio, KPI dashboards, automated reporting, workflow automation with n8n, SQL/Python scripting

EXPERIENCE

Data Migration Specialist

Provox Global

Present

Islamabad

- Managed **end-to-end data migration** of business data from a legacy ERP to a new ERP, extracting and preparing source data using **SQL** and **Excel**, then transferring and validating records in the new system.
- Performed **data quality checks** throughout the migration process, identifying and resolving **NULL/missing values**, **duplicate records**, **inconsistent fields**, and other data discrepancies by comparing records across systems and coordinating with stakeholders to correct source data.
- Investigated and resolved **data issues and discrepancies**, tracing problems to their source and determining whether they originated from **data**, **mappings**, **configurations**, or **transformation processes**.
- Used **SQL** and **Excel** to analyze, compare, reconcile, and validate datasets across legacy and new ERP systems, ensuring migrated records were **complete**, **accurate**, and **consistent** with source data.
- Helped develop **n8n workflows** to automate repetitive **data-management and validation processes**, reducing manual effort and improving consistency in recurring workflows.
- Developed repeatable **data validation and migration procedures** to improve consistency across subsequent data loads and provide a structured approach to identifying and resolving **data-quality issues**.

Business Development Associate

Cowlar Design Studio

Islamabad

- Researched and analyzed **end-to-end hotel operations** to define functional and **data requirements** for a Hotel ERP, covering reservations, booking, check-in/check-out, room status, housekeeping, food & beverage operations, room service, in-room ordering, security deposits, guest charges, and billing.
- Translated complex business processes into **structured data models**, defining **entities**, **attributes**, **relationships**, **statuses**, and **business rules** for guests, reservations, rooms, transactions, departments, and other core ERP components.
- Designed **Role-Based Access Control (RBAC)** structures for hotel staff, mapping permissions to the **data and workflows** required by front-desk staff, managers, housekeeping, restaurant and kitchen staff, and other operational roles.
- Mapped the complete **guest lifecycle and data flows** from reservation through checkout, covering booking, room allocation, guest status changes, service requests, room-service orders, charges, deposits, and final billing.
- Developed **wireframes and interactive prototypes** for core ERP modules to guide developers during implementation.

- Structured and implemented **backend data models** and turned entities, attributes, relationships, and business rules into usable **data structures** for hotel ERP modules.
- Conducted **competitor and market research** to identify hotel-management practices, operational requirements, and opportunities to improve ERP workflows and **data structures**.
- Applied similar **business-process and data-modeling analysis** to a Retail ERP solution; researched **product, inventory, pricing, promotions, sales, customer, and transaction** workflows and turned requirements into structured system and data models.
- Tested **pricing, discount, and coupon logic** supporting **1,000+ SKUs** according to business rules and transaction conditions to ensure promotions and pricing were consistent.

Data Analyst Associate (Intern)

Excelebrate

Dubai (Remote)

- Led a **5-member international team** in analyzing marketing campaign and learner datasets for an online education institute.
- Created a **PostgreSQL database** from multiple Excel datasets containing **10,000+ records**, organizing marketing campaign performance and learner information into structured tables for efficient querying and analysis.
- Wrote **SQL queries** to calculate and analyze **marketing KPIs**, including impressions, clicks, **CTR**, leads, conversion rate, **CPA**, campaign response rate, enrollment rate, and performance by campaign, channel, audience segment, and geography.
- Analyzed **learner KPIs and demographic patterns**, including enrollment volume, average learner age, gender distribution, nationality and country representation, subject popularity by demographic group, learner preferences by country, enrollment potential by market, and **engagement, retention, and funnel progression** indicators.
- Conducted **cohort and comparative analysis** across marketing campaigns and learner segments to evaluate campaign effectiveness, identify **funnel drop-offs**, compare learner preferences across demographic groups, and surface performance gaps and anomalies.
- Developed interactive **dashboards** in **Google Looker Studio** for stakeholders to monitor **KPIs** and identify areas requiring attention.
- Presented **dashboards, KPIs, and analytical findings** to stakeholders in virtual meetings, communicating results clearly and linking marketing and learner insights to business and operational decisions.
- Coordinated the team's analytical workflow and established **data-validation and peer-review** practices, ensuring consistent analysis and **100% on-time delivery** of project deliverables.

EDUCATION

University of Greater Manchester

Bachelor's in Computer Science

Islamabad, PK

Mar. 2023 – Aug. 2027

PROJECTS

HR Employee Churn Prediction | *Python, Scikit-learn, Random Forest, XGBoost*

2026

- Built an end-to-end **ML pipeline** (feature engineering, **SMOTE** class balancing, hyperparameter tuning) achieving **99% accuracy/97% recall**, and deployed a **targeting dashboard** to flag high-risk segments.

TECHNICAL SKILLS

Languages & Tools: SQL, Python (Pandas, NumPy, Scikit-learn), R, Git, Docker, n8n

Data & BI Tools: Power BI, **Tableau**, Looker Studio, **Excel** (Pivot Tables, LOOKUPS), DAX

Databases & ETL: PostgreSQL MySQL, Data Migration, ETL Pipeline Design, Schema Design

CERTIFICATIONS

SAP Basis Cert (Academy Europe) | Google Data Analytics Professional Cert | Deloitte Job Simulation (Forage)
